V. MECHANISM ADJUSTMENT

Fig. 4 Flywheel Thrust Loose Play Adjustment

1. FLYWHEEL THRUST LOOSE PLAY ADJUSTMENT

Adjust by turning flywheel thrust loose play adjustment screw to obtain a 0.05 – 0.15 mm of loose play when the flywheel is moved as indicated by the arrow mark.

Paint lock the adjustment screw.

Fig. 5 Pinch Roller Pressure Measurement

2. PINCH ROLLER PRESSURE MEASUREMENT (Refer to Fig. 5)

At playback mode, push the pinch roller with a spring gauge until the pinch roller separates from the capstan by about 1 mm to 2 mm and then gently return. Take a reading of the spring gauge indication at the moment the pinch roller touches the capstan and begins to rotate.

Specified Pinch Roller Pressure: 400±50 gm
In case specified pressure cannot be attained, replace the pinch roller spring.

3. TAKE-UP TORQUE AT VARIOUS MODES

Playback mode: 35 to 55 grm-cm

Fast Forward mode: 70 to 130 grm-cm

Rewind mode: 70 to 130 grm-cm

In case specified take-up torque cannot be attained,
Playback mode: Replace Take-up reel table
Block Comp.

Fast Forward or Rewind mode:

Replace entire supply reel
assembly

Fig. 6 Tape Speed Adjustment

4. TAPE SPEED ADJUSTMENT

(Refer to Fig. 6)

Playback a 1,000 Hz pre-recorded test tape and adjust tape speed adjustment screw to obtain a tape speed of 1,000 Hz ±2%.

VI. HEAD ADJUSTMENT

Fig. 7

Fig. 8

Fig. 9

1. TAPE GUIDE HEIGHT ADJUSTMENT

(Refer to Fig. 7 and Fig. 9)

- 1) When using an ordinary cassette, the tape guides and heads, etc. are not visible. As shown in Fig. 9 use a cassette tape from which part of the cassette case has been cut out and a mirror installed for easy visibility of the head area when making tape guide height adjustment.
- 2) At playback mode, adjust tape guide A and tape guide B height with tape guide height adjustment nuts so that the tape runs smoothly and does not catch on the tape guides.

2. HEIGHT ADJUSTMENT OF RECORDING/PLAYBACK COMBINATION HEAD (Refer to Fig. 7)

- 1) Utilize the cassette tape used in Tape Guide Height Adjustment above, and playback the leader tape part of cassette tape.
- 2) As shown in Fig. 7 adjustment head height with screws (A), (B) and (C) until the upper edge of the left channel REC/PB Combination head core.

3. AZIMUTH ALIGNMENT ADJUSTMENT OF RECORDING/PLAYBACK COMBINATION HEAD (Refer to Fig. 7)

- 1) The cores of recording and playback heads are mounted in a single head holder to form the recording/playback combination head otherwise known as the New GX Head. Both recording and playback head cores move when azimuth alignment is adjusted. To obtain optimum playback head core azimuth alignment, follow the instructions 2) - 5) carefully.
- 2) Playback a 10 kHz azimuth alignment adjustment test tape and adjust the adjustment screw (A) until the output level of both channels are at maximum.
- 3) Invert cassette and see whether there is an output level difference from the above. If there is a difference, repeat 2) and readjust.
- 4) Record a 10 kHz, -20 VU signal from the audio frequency oscillator.
- 5) Rewind and check for any fluctuation in the output level at playback.

4. ADJUSTMENT OF THE RECORDING/PLAYBACK COMBINATION HEAD PROJECTION (Refer to Fig. 7 and Fig. 8)

This adjustment is unnecessary unless the head base is moved on purpose as in the case of head replacements, etc.

- 1) Fix the head base with screws (D) (E) and (F). In doing so, the center of the shaft should be placed at points (a) of head base holes (d) and (e) as shown in Fig. 8. Conduct adjustments 2 and 3 above.
- 2) Record a 10 kHz, -20 VU signal from the audio frequency oscillator.
- 3) Rewind and check for level fluctuation at playback.
- 4) Measure the wow and flutter characteristics and confirm that it is less than 0.06% (WRMS).
- 5) If there is a level fluctuation, the projection of the recording/playback combination head is too shallow and the head base must be moved slightly toward "b" in Fig. 8.

If the wow and flutter characteristics are poor, the recording/playback combination head projection is too deep and the head base must be moved slightly toward "c". Repeat 2) - 4) above until optimum position is obtained.

NOTES:

1. Be sure to clean the heads prior to head adjustment.
2. Be careful not to use a magnetized driver or other magnetized tools in the vicinity of the heads.
3. Be sure to demagnetize the heads with a Head Demagnetizer before and after head adjustment.
4. When a mirror installed cassette test tape as shown in Fig. 9 is required, it can be ordered from AKAI Electric Co.
5. The position where spring (A) meets the tape guide base is adjusted at the place of manufacture and readjustment is unnecessary.

- NOTES:
1. Except for Steps 6 thru 8, set Tape Selector to LN position.
 2. Set Dolby N.R. Switch to OFF.
 3. Except for Step 12 set MPX Filter Switch at OFF position.
 4. If a flat characteristic cannot be obtained from 1,000 Hz to 10,000 Hz at LH, CrO₂, or Fe-Cr positions, fine adjust at VR5 (LH), VR6 (CrO₂) or VR7 (Fe-Cr) respectively.
 5. Because each of these adjustments are vital to perfect Dolby N.R. circuit operation, be sure that they are carried out with as little error as possible.
 6. Use the following cassette measuring tape:
 - LN Tape: Fuji FL C-60
 - LH Tape: Maxell UD C-60
 - CrO₂ Tape: TDK SA C-60
 - Fe-Cr Tape: SONY Duad C-60
 7. Stop recording bias oscillator while making Rec Peaking Adjustment (Refer to Figs. 11, 12).
 8. Unless the core is moved intentionally this adjustment is not necessary.

Resistor and Capacitor which is not listed in this parts list, please refer to
COMMON LIST FOR SERVICE PARTS.

HOW TO USE THIS PARTS LIST

1. This parts list is compiled by various individual blocks based on assembly process.
2. When ordering parts, please describe parts number, serial number, and model number in detail.
3. How to read list.

4. The symbol numbers shown on the P.C. Board list can be matched with the Composite Views of components of the Schematic Diagram or Service Manual.
5. The indications of Resistors and Capacitors in the photos of P.C. Board are being eliminated.
6. The shape of the parts and parts name, etc. can be confirmed by comparing them with the parts shown on the Electrical Parts Table of P.C. Board.
7. Both the kind of part and installation position can be determined by the Parts Number. To determine where a parts number is listed, utilize Parts Index at end of Parts List.
It is necessary first of all to find the Parts Number. This can be accomplished by using the Reference Number listed at right of parts number in the Parts Index. (meaning of ref. no. outlined in Item 3 above).
8. Utilize separate "Price List for Parts" to determine unit price. The most simple method of finding parts Price is to utilize the reference number.

CAUTION:

1. When placing an order for parts, be sure to list the parts no., model no., and description. There are instances in which if any of this information is omitted, parts cannot be shipped or the wrong parts will be delivered.
2. Please be careful not to make a mistake in the parts no. If the parts no. is in error, a part different from the one ordered may be delivered.
3. Because parts number and parts unit supply in the Preliminary Service Manual (Basic Parts List) may be partially changed, please use this parts list for all future reference.
